

# AIO Assessment - AiVenture.ro

## 98.08 / 100

25 PASS - 1 PARTIAL - 0 FAIL - Weighted result: 25.5 / 26

### Assessment statement

This digital assessment was calculated by **GPT-5.6 Sol in this ChatGPT session** using the 26-signal AIO framework supplied by AiVenture and the evidence/test results reviewed in this conversation.

It is **not** an OpenAI certification, an independent audit performed by OpenAI, a legal/compliance certification, or a guarantee of search, citation, commercial, security, or A2A performance.

### Method

Scoring: PASS = 1.0; PARTIAL = 0.5; FAIL = 0. Formula: sum of signal weights / 26 x 100. Result: (25 x 1.0 + 1 x 0.5) / 26 x 100 = 98.08%.

Assessment timestamp: 2026-09-24T18:06:44+03:00

| #  | AIO signal                      | Status  | Basis                                                                                                     |
|----|---------------------------------|---------|-----------------------------------------------------------------------------------------------------------|
| 1  | Perplexity Source Citation      | PASS    | External test: Perplexity found and cited aiventure.ro.                                                   |
| 2  | ChatGPT Browse Visibility       | PASS    | External test: ChatGPT found aiventure.ro via web search and used it as a primary source.                 |
| 3  | Gemini Grounding Eligibility    | PASS    | External test supplied by user: Gemini reported finding and using aiventure.ro through Google Search /    |
| 4  | Claude Source Indexing          | PASS    | External test supplied by user: Claude found aiventure.ro via web search and fetched multiple pages/re    |
| 5  | Source Citation Quality         | PARTIAL | Cross-engine citation/reconstruction quality was not fully consistent; Gemini showed semantic drift for P |
| 6  | Table / List Extractability     | PASS    | Covered by AIO implementation artifact extractable-tables.json.                                           |
| 7  | Content Indexability by LLMs    | PASS    | Covered by existing crawl/indexability infrastructure.                                                    |
| 8  | Internal Link Semantic Map      | PASS    | Covered by existing Digital DNA / semantic relationship infrastructure.                                   |
| 9  | Chronological Versioning        | PASS    | Covered by existing version/session metadata.                                                             |
| 10 | Token-Efficient Headings        | PASS    | Covered by token-efficient-headings.json.                                                                 |
| 11 | Content Freshness Signal        | PASS    | Covered by existing generated/version/freshness metadata.                                                 |
| 12 | Corpus Inclusion Signal         | PASS    | Covered by corpus-inclusion.json and crawl-access declarations.                                           |
| 13 | Contrastive Analysis Presence   | PASS    | Covered by contrastive-analysis.json.                                                                     |
| 14 | Dense Paragraph Summaries       | PASS    | Covered by ai-summary-blocks.json.                                                                        |
| 15 | AI Summary Block                | PASS    | Covered by ai-summary-blocks.json.                                                                        |
| 16 | Contradiction Avoidance         | PASS    | Covered by canonical negative-scope/governance rules.                                                     |
| 17 | Allow-Lane Matrix               | PASS    | Covered by allow-lane-matrix.json.                                                                        |
| 18 | Semantic Keyword Clusters       | PASS    | Covered by semantic-keyword-clusters.json.                                                                |
| 19 | Fact Density vs Fluff Ratio     | PASS    | Model assessment: principal public content is predominantly factual/operational; no canonical numeric     |
| 20 | Long-Form Completeness          | PASS    | Covered by FAQ Hub / long-form structured content.                                                        |
| 21 | Concept Cluster Coverage        | PASS    | Covered by concept-cluster-coverage.json.                                                                 |
| 22 | Inference Trigger Keywords      | PASS    | Covered by inference-trigger-keywords.json.                                                               |
| 23 | LLM-Readable Metadata           | PASS    | Covered by metadata / JSON-LD / machine-readable resources.                                               |
| 24 | Unique Data / Proprietary Stats | PASS    | Covered by proprietary-stats.json.                                                                        |
| 25 | RAG-Ready Content Format        | PASS    | Covered by rag-chunk-map.json and structured Q&A/chunking.                                                |
| 26 | Expertise Signals in Content    | PASS    | Covered by expertise-signals.json.                                                                        |

## **Key limitation on signal #5**

Source Citation Quality is PARTIAL because cross-engine semantic reconstruction was not fully consistent. In the Gemini test supplied in the conversation, RRVI was reconstructed using a historical/different expansion rather than the current definition observed in the reviewed RRVI artifact. Discovery/grounding therefore passed, while citation/reconstruction quality was not scored as fully consistent.

## **Integrity**

The SHA-256 values in the accompanying SHA256SUMS.txt identify the exact bytes of this PDF and the machine-readable JSON assessment. Any byte-level modification will produce a different SHA-256 digest.
